

## Ten Reasons Why You Should Choose VertX CS Access Control

- 1. A Fully Integrated System that Manages and Monitors Access, Video, Intrusion, and Fire.** Fully integrated with the software you already use, VertX CS gives you the ability to cost-effectively monitor access control the same way you monitor alarms and video.
- 2. Control and Manage Brass-keys.** End the challenges of lost, stolen, shared and unauthorized duplication of keys through installation of cost-effective VertX CS hardware.
- 3. Branch-located PC and Software Not Required.** VertX CS is fully hosted, administered and remotely operated from your current CS software, so field PCs and software are not required, eliminating the time and costs needed to train branch personnel.
- 4. VertX CS is Embedded in Your Existing GUI.** No need for additional workstations or new software. HID has partnered with the leading automation software providers including Bold, DICE, and Micro Key who have developed modules specifically for VertX CS.
- 5. Minimal Training Required.** VertX CS works within your current automation software that operators are already familiar with. They only need to be trained on the additional windows in the existing software and how to process events.
- 6. Enable Remote Administration to Authorized Personnel.** Through a secured web browser, authorized field employees can manage real-time data; this includes adding and deleting employees, remote entry processing and running reports as needed. The possibilities are endless.
- 7. SQL Integration to HR Software.** Integrate intrusion PIN code authorization and access control privileges across all human resource management tools.
- 8. Static or Dynamic Addressed Network Citizenship.** Manage bandwidth and network architecture for all branches on a case by case basis because VertX CS hardware can be flexibly addressed as static or DHCP.
- 9. Linux Based Firmware Operating System.** VertX CS is flash upgradeable and Linux-managed, therefore enabling future modifications and automation software migration.
- 10. HID – Your Partner for Life.** From the highest quality products to superior customer support, service, marketing and training, HID is a brand you can trust to be with you today and into the future.
